New CT Scanner

Here at Forest Vets we are committed to providing your pets with the latest diagnostic technology and equipment to keep them fit and healthy. We understand that your pet is an important part of your family.

We are currently installing a brand new CT scanner at our hospital in Epping. This will enable us to see three-dimensional detailed images of your pet's internal organs, blood vessels and bones. These images can be vital in helping to diagnose and monitor a wide range of conditions. **We are delighted to be able to offer this facility to our clients from November.**

Radioiodine Unit Update

We are pleased to share that we have successfully treated a number of cats diagnosed with hyperthyroidism at our Radioiodine Unit based at the Harlow surgery. Hyperthyroidism is one of the most common hormone-related diseases in cats in the UK. Radioiodine is considered the gold standard treatment of choice. We are one of only 10 centres offering this treatment in the UK.

Rabbit Vaccine

The new rabbit vaccine for VHD2 is now available in all of our surgeries - call to book.

If you would like any further details regarding any of the items in our newsletters, we would love to hear from you - call your local surgery, visit www.forestvets.com or email general@forestvets.com
